### Emissions Data ⓘ

Program	Pollutant	Units	Trend	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
GHG	Methane	MTCO2e											40.50
NEI	Cadmium	Pounds					.02			.20			
NEI	Fluorene	Pounds					.00			.00			
NEI	Phenanthrene	Pounds					474.00			.02			
NEI	Pyrene	Pounds					.00			.00			

by pollutant for each program and each year that values are available. Each of these programs is governed by a different regulatory authority and performs a distinct function. The NEI program includes both facility-reported and government-augmented emissions, while the other programs include exclusively emissions reported by facilities. While each program is distinct, there is some overlap in pollutants covered by the different programs. Where the same pollutant exists in multiple programs, the Air Pollutant Report will list each program's emissions estimates. Emissions values reported under multiple programs are not exclusive and should not be added together. Due to programmatic differences in calculation methods and how "facility" is defined, there may be significant discrepancies in emissions values between programs. By consolidating emissions data from four different EPA programs into one report, the Air Pollutant Report provides a single source for users looking to understand a facility's full suite of pollutants and the range of possible emissions associated with a given pollutant depending on the emissions program.
